

Pilot Study at Whiteface Mountain to Investigate Chemical Processing of Organics within Clouds (CPOC)

A scenic view of Whiteface Mountain peak. The foreground is dominated by large, grey, moss-covered rocks. In the middle ground, a stone observation tower with a glass-enclosed top section stands prominently. A person in a blue shirt is visible standing on the rocks to the right of the tower. The background shows a vast, hazy landscape of rolling hills and valleys under a blue sky with scattered white clouds.

Sara Lance, ASRC, University at Albany

September 13, 2017

WFM Pilot Study Overview

1. Took place Aug 11-25, 2017
<https://www.asrc-research.com/cpoc>
2. Substantial SUNY/ASRC involvement.
7 Faculty, 6 Staff, Students
3. Lots of cloud, aerosol and meteorological data was obtained, pertinent to the chemical processing of organics within clouds
4. Data can be accessed at:
<http://atmoschem.asrc.cestm.albany.edu/~cpoc/>

Biweekly CPOC data meetings will start Thurs Sep 28 at 3-4pm

- weather forecasts (LCL, rain, etc)
[Justin Minder](#), [Matthew Brewer](#)
- below-cloud aerosol measurements from the ASRC Sprinter Van (HR-TOF-AMS, CCN, SMPS, CPC)
[Jim Schwab](#), [Sara Lance](#), [Jie Zhang](#), [Janie Schwab](#), Dan Orlowski (RPI), [Matt Ninneman](#), [Joe Marto](#), [Richard Brandt](#)
- summit aerosol measurements (CCN, SMPS)
[Sara Lance](#), Dan Orlowski (RPI) , [Richard Brandt](#), [Paul Casson](#)
- summit trace gas and met data (wind direction, wind speed, T, RH, CO, NO_y...)
• [Jim Schwab](#), ALSC , [Richard Brandt](#), [Paul Casson](#)
- summit cloud measurements (FFSSP, Parsivel disdrometer, LWC)
[Sara Lance](#), Dan Orlowski (RPI), [Justin Minder](#), [Matthew Brewer](#), ALSC, [Richard Brandt](#)
- radiosonde measurements (RH, Temperature, GPS location, Altitude)
[Justin Minder](#), [Matthew Brewer](#), [Janie Schwab](#), Dan Orlowski (RPI) , [Richard Brandt](#)
- Remote sensing: wind LIDAR, sun photometer (cloud base altitude, wind speed + direction, aerosol)
[Jeff Freedman](#), [Bhupal Shrestha](#), [Everette Joseph](#), [Qilong Min](#), [Richard Brandt](#)
- met towers (RH, Temperature, wind speed + direction, pressure, solar irradiance)
[Dave Fitzjarrald](#), [Matthew Brewer](#), [Paul Casson](#)
- ambient met sensors (RH, Temperature, GPS location, Altitude)
[Justin Minder](#), [Matthew Brewer](#)
- aerosol forecasts (trajectories, timeseries, chemical speciation)
[Sarah Lu](#), [Jeongran Yun](#), [Sheng-Po Chen](#)
- cloud water analysis (ionic composition, organic content...)
[Paul Casson](#), Amy Christiansen (UC Irvine), AnnMarie Carlton (UC Irvine), ALSC, [Jim Schwab](#), [Sara Lance](#), [Jie Zhang](#)

AirBNB in Wilmington, NY

Stayed for the 2 week
Intensive Operations Period:

- Sara Lance
- Dan Orlovski
- Matthew Brewer
- Jie Zhang
- Amy Christiansen

Stayed for a few nights:

- Jim and Janie Schwab
- Justin Minder
- Dave Fitzjarrald
- Matt Ninneman
- Joe Marto

Student Involvement (grad and undergrad)

- Instrument Deployment
- Data Acquisition
- Weather Forecasting
- Balloon Launches
- Data Analysis
- Presentation of preliminary results

CPOC Pilot Study at WFM

The Summit!

Summit of WFM

In-Situ Cloud measurements

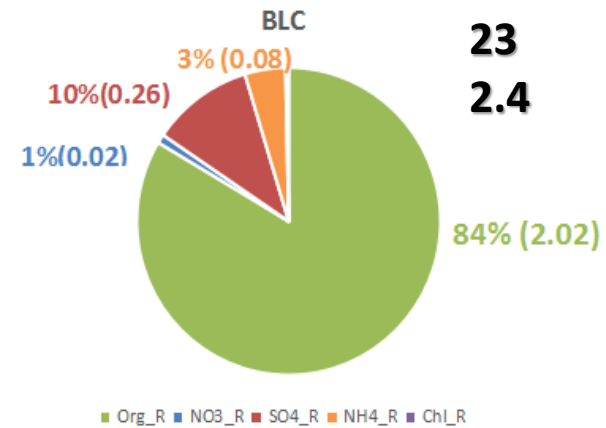

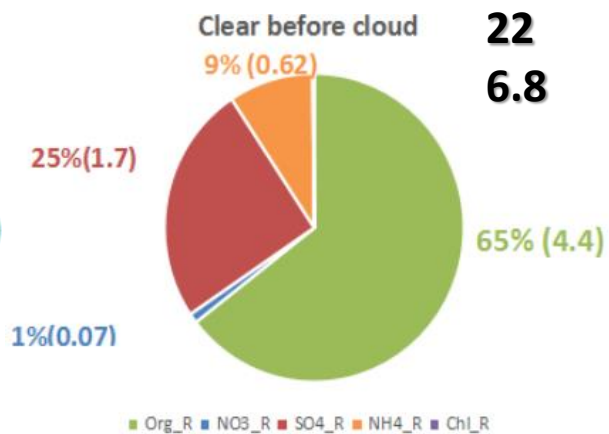

Aerosol Instruments installed at the WFM summit

Cloud Water Chemical Analysis

- Transition Metals (Fe, Cu, Mn)
 - UV-Vis Spectroscopy
 - High-resolution inductively-coupled plasma mass spectrometer
- Carboxylic acids
 - HPLC and IC
- Water soluble organo-nitrogen compounds
- Surface droplet tension
- TAG GC/MS
- HR-TOF-AMS

Science Question 3:

Cloud Processing Impacts on Aerosol

How does liquid-cloud-water-mediated processing modify

- particle size distribution
- organic/inorganic mass loading
- oxidation state
- brown carbon or OA-metal ligands (e.g. iron oxalate) concentrations
- toxicity (ROS, reactive oxygen species)
- O:C ratio
- mixing state
- hygroscopicity
- volatility
- morphology
- optical properties of atmospheric aerosols

Science Question 3:

Cloud Processing Impacts on Aerosol

How does liquid-cloud-water-mediated processing modify

- particle size distribution
- organic/inorganic mass loading
- oxidation state
- brown carbon or OA-metal ligands (e.g. iron oxalate) concentrations
- toxicity (ROS, reactive oxygen species)
- O:C ratio
- mixing state
- hygroscopicity
- volatility
- morphology
- optical properties of atmospheric aerosols

Science Question 3:

Cloud Processing Impacts on Aerosol

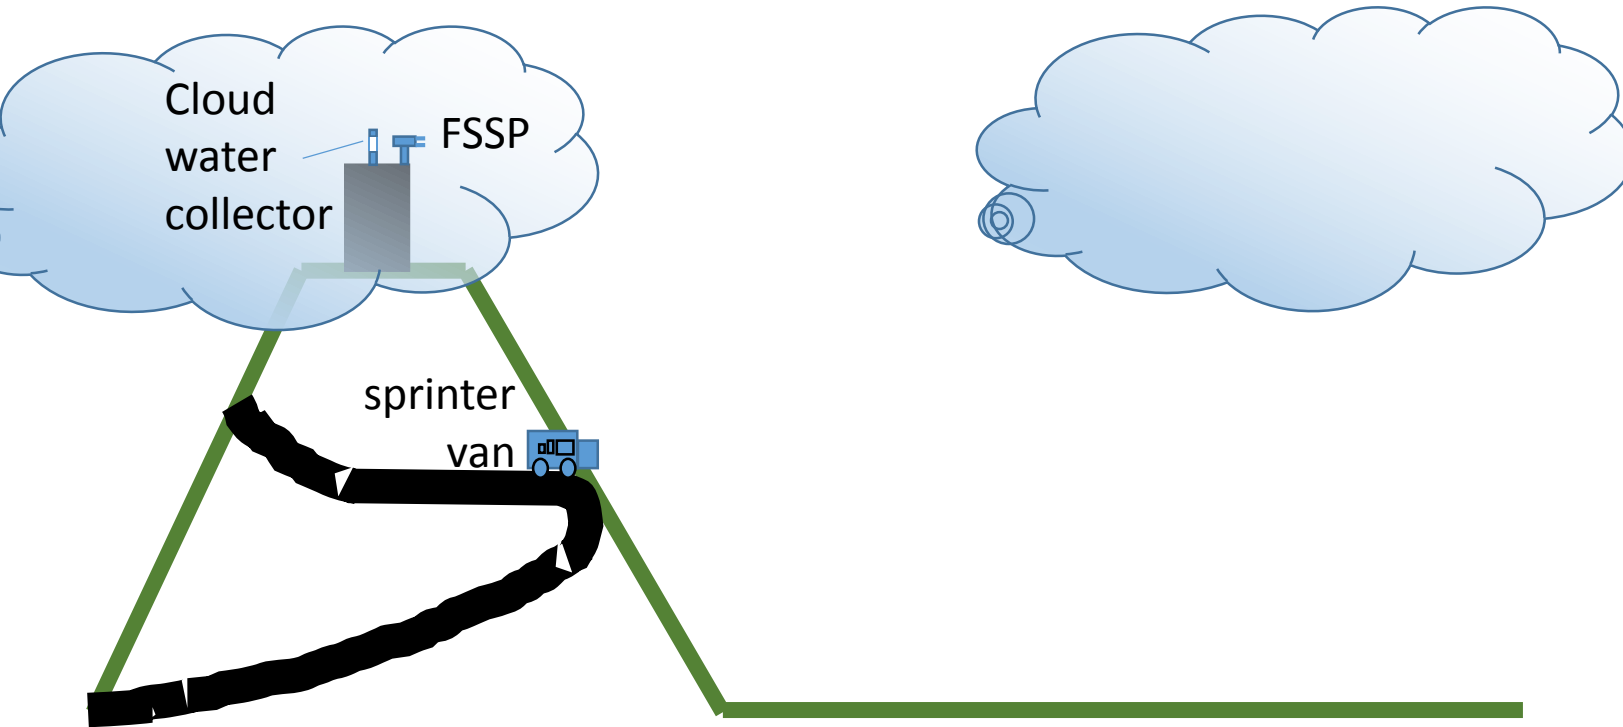

What sort of coupling occurs between organics/inorganics during cloud processing?

What is the mixing state of transition metal-containing particles (like mineral dust) relative to the cloud water?

What is the contribution of biomass burning/ residential and recreational pellet stove/wood burning emissions to the WFM during the warmer seasons when cloud water is sampled at WFM?

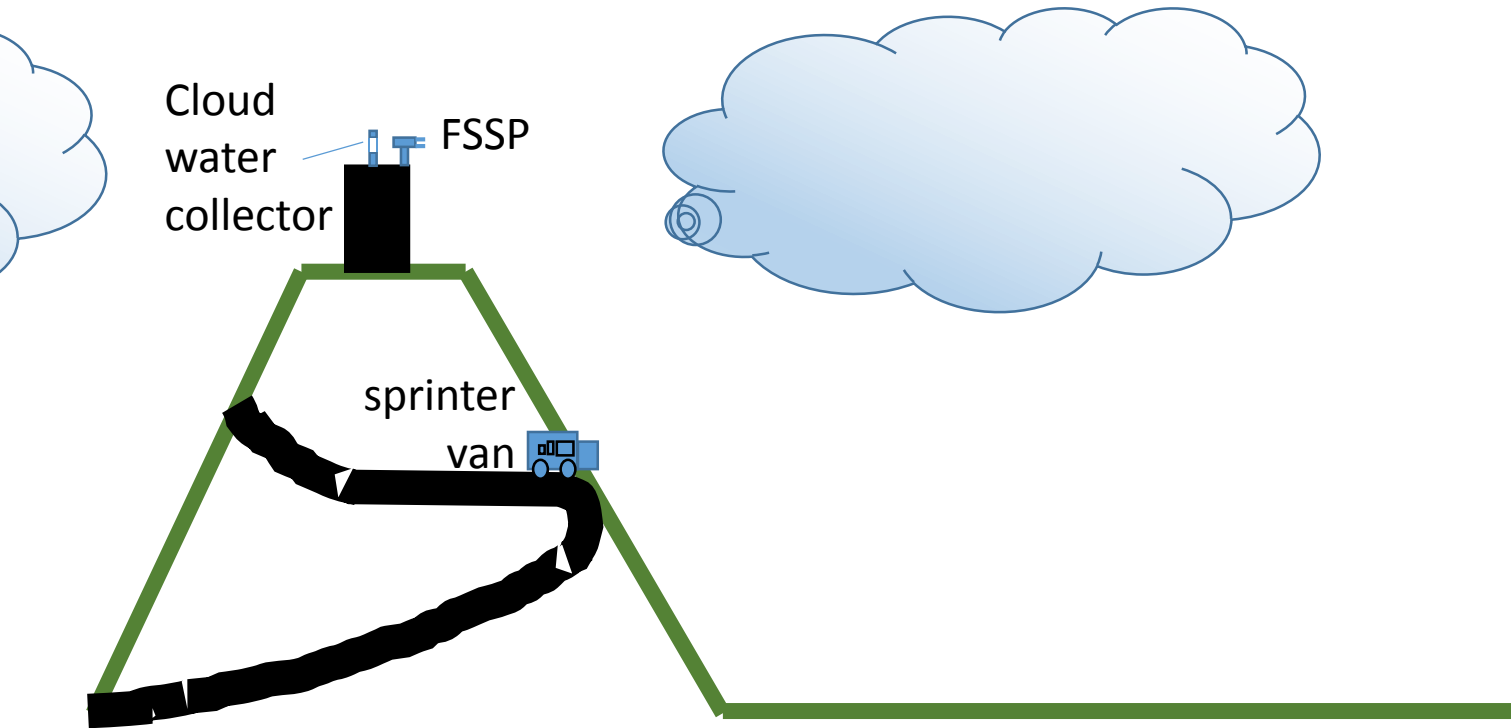

Can we add more constraints to counteract ambiguity of complex terrain (possibly no clear in-and-out trajectory for the aerosol, but instead a continual recycling of the aerosols below cloud and possibly at cloud edges/top)?

Pilot Study Deployment Plan

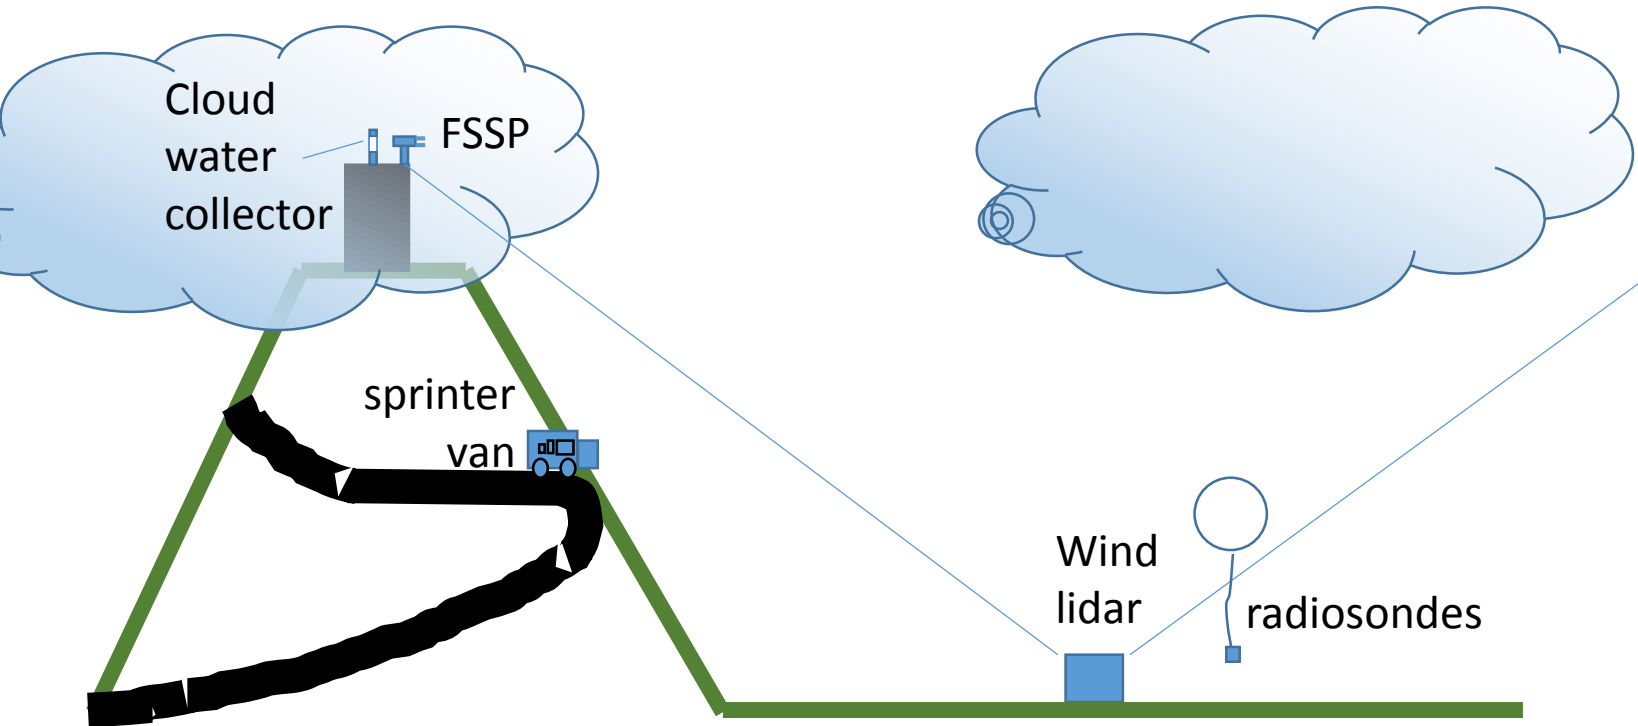

1. In-situ observations at Summit
 - Cloud droplet size distribution, cloud water chemistry, LWC
 - “Between-cloud” aerosol characterization (size distribution, CCN activity)
2. Below-cloud aerosol characterization (from the Sprinter Van)
 - Aerosol composition, size distribution, CCN activity

Pilot Study Deployment Plan

1. In-situ observations at Summit
 - Cloud droplet size distribution, cloud water chemistry, LWC
 - “Between-cloud” aerosol characterization (size distribution, CCN activity)
2. Below-cloud aerosol characterization (from the Sprinter Van)
 - Aerosol composition, size distribution, CCN activity, Ozone

Pilot Study Deployment Plan

3. Doppler lidar – 3D wind profile, cloud base
 - Deployed now at ASRC
 - Upwind location desired (less important than proximity to the summit – tradeoff is lack of cloud base observations at summit. Would only have Wild Center camera for estimating that)

4. Radiosondes – vertical profile of RH, T, winds
 - 4-8 per day on “golden days”
